

Pharo is a modern, dynamically-typed, reflective, and pure object-oriented programming language. It offers strong productivity via a fully live programming environment. It supports Xtreme TDD, a powerful development technique that puts live objects at the center of the coding experience. More information at <http://www.pharo.org>

Pharoers are used to say that programmers will never program the same once they coded seriously in Pharo.

Learning Pharo is easy. Software developers learn Pharo in a couple of days. In addition, you can follow an excellent online free lecture available at: <http://mooc.pharo.org>.

Now programming is not only code logic but communicating with other developers via such code. *Pharo with Style*, intended for both students and developers, defines a list of guidelines to help you writing better communicating code. *Pharo with Style* will bring you fast to the next level: You will code like the pros.
